Since researchers have different research goals, all of our projects are setup as custom. The purpose of this Price Illustration is to show you what a typical project might cost. You are always welcome to design your own protocol. Please do not feel locked into using these ideas exclusively. Please refer to the Custom Antibody Production Price Schedule to view all available services and to calculate costs for your project or contact us for a consultation and a custom quotation. Providing you with functional antibodies in a reasonable period is our goal.

Please keep in mind we offer a full range of Immunochemistry Services such as peptide sequence selection assistance, antigen purification assistance, peptide synthesis, conjugations, ELISAs, Westerns, affinity purification, RNA harvesting, and antibody validation to name a few.

We also offer our **Quick Draw Protocol** and our **Traditional Fusion Protein Protocol**.

On or before day 70 (if titer is acceptable) you may elect to start production bleeds, continue with monthly bleeds, or terminate your project. See next page for project continuation and termination costs.

Each time we send you sera, we use Federal Express Priority Overnight Service. See our price schedule for shipping charges. To save shipping charges, we can store and send production bleeds in a single shipment once a month.

This Price Illustration is prepared to give an estimate of expenses for custom antibody production for your convenience and is not a contract of services provided. Because results of custom antibody production are dependent on many factors such as antigen preparation and success with animals having variable immune systems, you may wish to change the protocol at any time. If you have an exact protocol you wish to follow, please allow us to recalculate the figures for a more precise quotation.
